

Benefits from the Operations that Enhance the Environment in 2023

Investment project in renewable energy with solar technology is one of the environmental quality development projects. It involves utilizing alternative energy from solar power to generate electricity, reducing greenhouse gas emissions. This initiative is implemented at Kangkoi facility, Saraburi Province. Besides environmental quality enhancement, in the year 2023, the company was able to reduce expenses from electricity usage at Kangkoi facility by a total of 33.5 million baht.
